COMPLIMENTARY WELLNESS ACTIVITIES DETAILS

HIGH-INTENSITY INTERVAL TRAINING (HIIT)

High-Intensity Interval Training (HIIT) consists of quick movements such as jumping jacks, high knees, spider jumps and burpee jumps. These exercises are designed to raise your heart rate and boost your metabolism. Notably, HIIT has been proven to be more effective in burning fat compared to traditional cardio exercises.

STRETCHING EXERCISES

Stretching exercises, including stretching neck, shoulder and torso muscles, can effectively improve blood circulation to the muscles and joints. Promoting blood circulation brings multiple benefits to your body, as it not only delivers nutrients to cells but also eliminates waste products generated from metabolism.

FUNCTIONAL TRAINING

Through muscle conditioning and joint movements, such as kettlebell push presses, medicine ball slams, bicep curls, and tricep brachii extensions, functional training enhances core strength, improves body stability, and promotes coordination, preparing your body for daily activities.

FULL BODY MOBILITY STRETCHING

By performing a variety of dynamic stretching exercises within the joint range of motion, including movements that simulate various sports activities, full body mobility stretching warms up your muscles, provides vital blood and oxygen to your joints, and enhances both your body's vitality and flexibility.

YOGA (FOUNDATION)

Embark on a journey of serenity with our guided yoga session. Through the practice of various asanas, participants will enhance flexibility and strength, improve concentration, and increase resilience, ultimately fostering physical and mental well-being.

SOUND THERAPY

Combining meditation and deep breathing techniques, singing bowls provide a unique experience to alleviate stress, reduce anxiety and release negative emotions, enabling you to enjoy deep relaxation and tranquility. The soothing sounds of the singing bowl aim to improve the quality of your sleep and promote the wellbeing for both your mind and body.

KNOW YOUR SKIN

Skin Instant© Lab consists of five sensors (measuring hydration, trans-epidermal water loss, elasticity, pigmentation and sebum levels) linked to a computer with an exclusive diagnostic analysis software programme developed by Biologique Recherche. Based on expert dermo-cosmetic analysis and objective measurements, the Skin Instant© Lab retrieves data from our knowledge bank to offer a selection of products and treatments perfectly matched to your Skin Instant© needs. A truly customised experience.
